Structure of the pipeline tagging system																																																																																																																																																																																																																																			
The pipetag consists of various information about the pipe Full pipeline tag as shown below Size-PipeSpec-Area-Service (Medie)-Serial number [100 PE17 201 LM 01] Example Two (2) digits. Starts with 01 [01] Two (2) to four (4) characters (letters) [LM - Liquid manure] Three (3) digits [201 - Manure feeding in tank 1] Pipe Spec name [PE17 - PE100 SDR17] Pipe size DN indication for Metric pipes OD indication for PE-pipe [This example is OD 100 mm]																																																																																																																																																																																																																																			
The pipe tag will be shown on the P&ID as follows: PipeSpec-Size Area-Service-Serialnumber Example of line tag notation on P&ID: PE17-110 201-LM-01 Line color corresponding to table above. The part below the pipeline is the Unique Line Tag. Unique Line Tag is generated automatically when creating complete Line Tag. Unique Line Tag is used by the P3D system when designing pipes in the 3D model and when generating Isometrics.
